What is Modern Management

“Modern Management in Microsoft 365 provides a secure way to manage data and office processes, it typically use tools such as Azure AD and Intune for security”

-ChatGPT

OBE for Modern Management

- More Secure
- Zero Trust
- Good Out of Box experience (OOBE) for the end user
- Consistent OOBE Experience
- Seamless Single Sign On (SSO)

Intune

- Available any where – Have internet will work
- Less moving parts – Simplified management
- Automatable
- Infinitely more scalable
- Reporting of policies being applied
- Not just Windows support out of the box
- Lower barrier of Entry

No dependency for On-Prem

- EUC experts no longer need to know:
 - IIS
 - SQL
 - WSUS
 - Server OS
 - Content Distribution
 - AD Replication for GPO's

End user can just go down to JB HI-FI and buy a laptop to keep working

So do you still need a central location to run your BCP? Or do you just need internet?

Thank You
