Walkthrough

Vulnerability Remediation Agent in Microsoft Intune

Attribute	Description
Identity	Runs as the user who first set up the agent and requires reauthentication after 90 days
Licenses	Microsoft Intune Plan 1 Microsoft Defender for Endpoint P2 or Defender Vulnerability Management Standalone
Permissions	Run hunting queries Read vulnerability data from Defender Read managed apps in Intune Read device configurations in Intune
Products	Security Copilot Microsoft Intune Microsoft Defender Vulnerability Management
Plugins	Intune Microsoft Defender
Role-based access	**Microsoft Intune**: Intune Read Only Operator **Microsoft Defender XDR**: - With Unified RBAC: Microsoft Entra ID Security Reader - With granular RBAC: A custom role with permissions equivalent to the Unified RBAC Security Reader
Trigger	Runs manually, on demand

Security Copilot Agents vs Logic Apps

Attribute	Security Copilot Agents	Logic Apps
Focus	Complex, AI-driven security workflows	General integration workflows
Strength	AI context, insights, security automation	Multi-system orchestration
Integration	Native to Microsoft SaaS security solutions or in Standalone experience with some 3P platforms	> 1,400+ connectors, including on-prem and SaaS platforms
Trigger	Within the SaaS solution built on Security Copilot Prompt-based, time-based	Outside Security Copilot Any webhook trigger
Flexibility	Limited to what is built-into agent	Offers great flexibility
Adaptability	Workflow benefits from continuous adaptation from customer input	Execution consistency is preferred
Persona	Pro-code, low-code or no-code	Drag-and-drop & Pro Code

Thank You
